Student-focused housing has a proven impact on grades and social development.

The benefits of student-focused housing are clear and now, more than ever, colleges and private developers are investing in dynamic residence halls that foster vibrant communities and promote student success. Campus housing has the unique ability to balance improved social and academic performance with the institution's need for differentiation. Understanding that the needs of the students and the needs of the university and developer are different, but not mutually exclusive, is the key to achieving that balance. At Kirksey, we believe that building strong communities within student housing starts with collaborative and innovative design.

STEPHEN F. AUSTIN STATE UNIVERSITY, LUMBERJACK LANDING - FRESHMAN RESIDENCE HALL

Path-of-Travel Planning.

When programming and designing student housing facilities, Kirksey prefers the path-of-travel philosophy over the destination point planning approach. In buildings that have been planned with “path of travel” in mind, students must pass through social and amenity spaces to reach their individual rooms. This concept casually forces students to interact in communal, open spaces rather than just retreating to their rooms. In contrast, destination-point planning means amenity spaces are treated as a destination - possibly separated from circulation spaces with a door. Creating an engaging path-of-travel for students alleviates social anxiety and conveys a message that everyone is welcome.

The Destination Point plan leads to **separation and isolation**. Students retreat to their rooms with little or no interaction with peers.

Our approach encourages social interaction and engagement

The **Path-of-Travel** plan promotes **interaction**. Students must pass through social spaces to reach their rooms.

Programming and planning go hand-in-hand.

With the benefit of experience and input from clients, students, and staff, our team's programming process considers all aspects of the facility: from the needs of students and the goals of the client to the budget, scope, and site.

Student Expectations and University Requirements.

Kirksey's design process addresses both.

Students today expect a sustainable, tech-savvy environment with resort-style amenities, but need a place that is safe, inclusive, and conducive to an academic setting.

Universities want a campus asset that is flexible, durable, profitable, efficient to operate, aids in recruitment, and results in well-adjusted students.

How can a housing facility encompass all of those characteristics? The answer: careful planning, thoughtful programming, efficient building design, and collaboration.

Undergraduate and Graduate Students.

Unique student groups have specific needs.

Whether a student is a new freshman or an advancing upperclassman, housing can be tailored to fit their needs. For most undergraduate students, student housing is their first foray into independence. As such, they want a place where they can feel at home and still test their freedom. Thoughtful design and programming can facilitate social engagement

and help students be part of a community. Building relationships can, in turn, help an undergrad develop confidence, learn new skills, grow academically, and be introduced to new viewpoints and cultures.

Graduate and Professional students may differ from their younger counterparts, but the overwhelming similarity they share is a need for community. Most graduate students prefer to be housed near other graduate students, where they can find solitude when necessary but still be amongst academically like-minded people. Additionally, universities would like to see their graduate and professional students leave their institutions as dedicated alumni. Introducing the local culture through grocers, coffee shops, or pubs, is an effective way to build loyalty and create a sense of home.

and academic
success.**

Living Learning Centers.

Most universities would agree that a residence hall can act as a social nexus on campus, but must offer more to attract prospective students. Programming a housing facility as a “Living Learning Environment” gives students a place to live, study, and socialize. Integrating classrooms and curriculum into undergraduate residence halls has become the norm rather than the exception. Modern campuses are incorporating Freshman Success Centers and/or Living Learning Centers in addition to residence halls, allowing students to interact socially with their peers while finding guidance from an academic advisor or housing staff.

Living styles.

Create the right layout for your students

Neighborhood

No one unit type or size works for all students or universities.

Freshman require less space and need more opportunities for social engagement.

Upperclassmen desire more space, a sense of independence, and amenities.

Graduate Students look for a community with other graduate students and a more settled life-style.

SAM HOUSTON STATE UNIVERSITY, LONE STAR HALL

Create a place where students can develop skills and relationships.

Amenity/Social Spaces.

Shared amenities and social spaces are key to encouraging the development of students. These spaces allow students to interact in a casual, comfortable environment and foster connection with their peers. Amenities and well-planned and programmed social areas can be a significant differentiator and recruiting draw for universities. When integrated into the living environment, multi-purpose, dining, laundry, and outdoor spaces work together to round out the housing facility and create a place for students to see and be seen.

Sustainability

The majority of students today seek to incorporate principles of sustainability into their college experience— both in lifestyle and curriculum. *Princeton Review has found that **over 60% of students are influenced by environmental concerns in their selection of a college or university.** This awareness has students expecting to live in spaces that meet high sustainability standards.

Such spaces provide benefits to students' health, the planet's wellbeing, and a university's bottom line through reduced energy use and operating costs. At Kirksey, we rigorously analyze every aspect of a residence hall's performance. We understand the unique occupancy loads affecting residence halls, and we design to maximize student wellbeing and comfort as well as energy and resource efficiency.

We design to maximize student wellbeing and comfort as well as energy and resource efficiency.

HOW TO MEASURE ENERGY IN RESIDENCE HALLS

	Floor area / bed
	Wall area / bed
	Roof as a % of envelope area
	Energy Use / bed
